ABOUT ROSHANA LIGHTING INDUSTRIES

The founders and management team of **Elin Lighting Industries**, driven by a forward-looking vision and comprehensive, practical strategies, have consistently sought to make a meaningful contribution to improving the quality of urban lighting and enhancing the visual character of cities, particularly their nighttime appearance. Backed by years of experience and expertise in the design and manufacture of lighting products, Roshana has developed its industrial operations with a clear commitment to delivering high-quality, durable products tailored to evolving market needs.

Since 2012 (1391 in the Iranian calendar), Roshana Lighting Industries has expanded its operations on an industrial scale through the establishment and development of a manufacturing facility covering more than 12,000 square metres in Mashhad, Iran. From the outset, continuous improvement in product quality, customer satisfaction, and responsiveness to diverse consumer requirements have remained among the company's foremost priorities. The integration of up-to-date knowledge and technology, modern management practices, systematic planning, creative designers, experienced specialists, and advanced machinery and equipment has provided a strong foundation for the continuous development of Roshana's product portfolio.

Roshana's activities encompass the design and manufacture of a wide range of lighting poles, park and street lighting fixtures, urban furniture, decorative urban elements, bus shelters, and industrial lighting products. In recent years, in line with advances in modern lighting technologies, the company has further expanded its operations to include LED floodlights, wall washers, and linear lighting systems for interior applications, continuously diversifying its product range in response to market requirements.

Roshana's management and manufacturing structure is founded on the principles of quality control, continuous improvement, and enhanced productivity. By implementing the ISO 9001 Quality Management System, along with management systems and methodologies such as 5S, Enterprise Resource Planning (ERP), and Integrated Management System (IMS), the company strives to manage every stage of its operations—from design and raw-material procurement to manufacturing, quality control, sales, and services—through structured and integrated processes.

Roshana's integrated operational chain comprises Design & Engineering, Research & Development, Metalworking, Welding, Sandblasting, Washing & Coating, Assembly, Sales & Marketing, and Quality Control & Quality Assurance departments. Using advanced drafting, modelling, and analytical software, as well as recognised standards applicable to the lighting industry, the Design & Engineering Department is responsible not only for product design and development, but also for the design of manufacturing equipment and tooling, lighting-environment simulations, and calculations related to lighting elements for civil and infrastructure projects.

The Research & Development Department, supported by laboratory equipment and a comprehensive range of mechanical, electrical, photometric, thermal, humidity, and durability tests, plays a significant role in evaluating product performance, extending service life, and continuously improving quality. Ongoing research into emerging

technologies and scientific developments within the lighting industry enables Roshana to develop its products in line with technological advancements and changing market demands.

Roshana's manufacturing facilities are equipped with a comprehensive range of metal cutting and forming machinery, hydraulic and mechanical presses, press brakes, roll-forming equipment, fibre laser cutting systems, and specialised welding equipment. The application of various welding processes, including SMAW, GMAW, and TIG, enables the production of robust metal structures suitable for diverse environmental conditions and lighting projects. Following fabrication, components undergo sandblasting, multi-stage washing, and surface preparation before entering the electrostatic powder-coating line, where controlled spraying and curing processes provide a uniform, durable, and high-quality protective finish.

Following production, products are completed and tested in the Assembly Department, while the Quality Control & Quality Assurance Department supervises and evaluates every stage of the manufacturing process—from incoming materials and semi-finished components to coating, assembly, and final products. Monitoring the effectiveness of the Quality Management System, optimising processes, and promoting continuous improvement throughout the organisation are also among the key responsibilities of this department.

The Sales & Marketing Department maintains the vital link between the market and Roshana's manufacturing operations through continuous market research, identification of customer requirements, collection and analysis of feedback, participation in specialised exhibitions and industry events, and expansion of the company's nationwide distribution and representative network. Roshana's representatives throughout the country are equipped with comprehensive technical product information and are committed to providing customers with professional product guidance and support.

Roshana's vision places particular emphasis on continuous process improvement, enhanced customer satisfaction, employee empowerment, increased productivity, compliance with occupational health and safety requirements, and the expansion of its presence in domestic and international markets. The development of advanced all-LED lighting products with lower energy consumption and longer service life, diversification of the product portfolio, expansion of the sales and representative network, and active participation in reputable international exhibitions are among the company's key development strategies, paving the way for greater access to global markets and future export opportunities.

With a firm commitment to producing modern, durable, efficient, and cost-effective lighting solutions, and supported by its in-house capabilities in design, manufacturing, engineering, and quality control, Roshana Lighting Industries continues to advance within the lighting industry while pursuing sustainable growth in both domestic and international markets.

This philosophy is embodied in the company's enduring motto:

*"Let the world be so **bright.**"*
